

Wolseley Avenue is now a 30 km/h neighbourhood greenway

Construction of the Wolseley Avenue neighbourhood greenway between Raglan Road and Maryland Street is complete and the speed limit is now 30 km/h. Vehicle speeds and volumes have come down, but are still higher than we'd like.

We are adding a few extra features this summer to highlight the neighbourhood greenway.

Enhanced paint markings (“sharrows”)

These are painted symbols of a bike and chevrons (arrows) to identify the lane is shared by cyclists and vehicles. Sharrows remind drivers, cyclists, and pedestrians of the neighbourhood greenway and reduce speeds.

Speed reader boards

These digital boards inform drivers of their current speed. When a driver is above the speed limit they encourage them to slow down. The use of these signs can be effective in reducing average speeds.

Neighbourhood greenway signage

These signs identify the shared route in addition to speed limit signage. Adding more signage reminds drivers of the shared road and speed limits to reduce speeds.

Next Steps

We will collect data over the summer to help us determine whether the new traffic calming elements are helping us meet our technical criteria for an all ages and abilities route. We will check in with the community later this year to collect more feedback on the greenway and determine if any further traffic calming is required.
